

# AH-102 - Right Hinge

**Spare Part Number:** AH-102  
**Net Weight:** 0.00kg  
**Net Dimensions:** 0.00cm x 0.00cm x 0.00cm

Description

## AH-102 Right Hinge

A hinge is a machine element that connects two bodies allowing angular movement about a fixed axis of rotation, all the while preventing translations and rotations on the remaining two axes. A hinge can be considered as a journal bearing with only one degree of freedom where a shaft is rotating in a hole. Hinges only allow one rotation, either yawing (the most common), pitching, or rolling.
